

## JamTrackerPlus™: Real-time Speed Alerts

The JamTrackerPlus™ software application displays traffic speed data and provides audible and / or visual alerts to the user. The data, which comes from traffic sensors placed along the roadway, is updated every minute.

JamTrackerPlus™ users can select road segments to monitor, set speed alert thresholds, view real-time speeds, receive alerts when conditions meet their monitoring criteria, and view a list of recent alerts. Audible and Visual alerts are available, and the application includes a “do not disturb” feature that allows users to temporarily disable the real-time alerts.

JamTrackerPlus™ offers:

- Real-time traffic speeds, updated every minute.
- "At-a-glance" overview of traffic speeds, with route segments color-coded to reflect speed ranges.
- The ability to set speed thresholds that trigger audible or visual speed alerts that point out potential traffic problems.
- A “do not disturb” feature that temporarily disables audible or visual notifications, while continuing to record triggered alerts.

### Coverage Area:

The Northern Virginia edition of JamTrackerPlus™ displays traffic data from the following roadways in Northern Virginia: I-66, I-95, I-395, and I-495. On I-66, coverage is available between Haymarket and the Capital Beltway (I-495). On I-95, coverage is available between Triangle / Quantico (Exit 150) and the Woodrow Wilson Bridge (crossing the Potomac River between Alexandria, VA and Oxon Hill, MD). On I-395, coverage is available between I-495 and the District of Columbia border. On I-495, coverage is available between Braddock Road and the Woodrow Wilson Bridge.

### Pricing:

Access to JamTrackerPlus™ is available by subscription; the subscription fee is \$40 per month, per seat license. Quantity discounts are available.
